AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

- 1. (Currently Amended) A method of producing pluripotent stem cells, which comprises culturing testis cells using a medium containing glial cell derived neurotrophic factor (GDNF) or an equivalent thereto, wherein the testis cells contain spermatogonial stem cells, and wherein the testis cells are derived from a postnatal mammal, and isolating pluripotent stem cells from the cultured testis cells.
- 2. (Original) The production method of claim 1, wherein the medium further contains leukemia inhibitory factor (LIF).
- 3. (Previously Presented) The production method of claim 1, wherein the medium further contains at least one of epidermal growth factor (EGF) and basic fibroblast growth factor (bFGF).
- 4. (Previously Presented) The production method of claim 1, which comprises culturing testis cells in the presence of feeder cells.
- 5. (Original) The production method of claim 1, wherein the testis cells are spermatogonial stem cells.
- 6. (Original) The production method of claim 5, wherein the spermatogonial stem cells are GS cells.
- 7. (Original) The production method of claim 1, wherein the testis cells are P53-deficient.
- 8. (Original) The production method of claim 1, which comprises the following steps:
- (Step 1) culturing testis cells using a medium containing glial cell derived neurotrophic factor (GDNF) or an equivalent thereto to obtain cultured cells;
- (Step 2) culturing the cultured cells obtained in Step 1, using a medium containing leukemia inhibitory factor (LIF) to obtain pluripotent stem cells.

- 9. (Original) The production method of claim 8, wherein the medium for Step 1 further contains leukemia inhibitory factor (LIF).
- 10. (Previously Presented) The production method of claim 8, wherein the medium for Step 1 further contains at least one of epidermal growth factor (EGF) and basic fibroblast growth factor (bFGF).
- 11. (Previously Presented) The production method of claim 8, wherein Step 1 comprises culturing testis cells in the presence of feeder cells.
- 12. (Original) The production method of claim 1, which comprises the following steps:
- (Step 1) culturing testis cells using a medium containing glial cell derived neurotrophic factor (GDNF) or an equivalent thereto to obtain GS cells;
- (Step 2) culturing the GS cells obtained in Step 1, using a medium containing glial cell derived neurotrophic factor (GDNF) or an equivalent thereto to obtain pluripotent stem cells.

13.-14. (Canceled)

- 15. (Original) The production method of claim 1, wherein the pluripotent stem cells are positive for at least any one selected from the group consisting of SSEA-1, Forsman antigen, β1-integrin, α6-integrin, EpCAM, CD9, EE2 and c-kit.
- 16. (Original) The production method of claim 15, wherein the pluripotent stem cells are positive for SSEA-1, Forsman antigen, β1-integrin, α6-integrin, EpCAM, CD9, EE2 and c-kit.

17.-34. (Canceled)
